

MAIL ASSURE CLOUD-BASED EMAIL SECURITY

Advanced Threat Protection For Inbound & Outbound Email!

Email remains one of the most common attack vectors, and one of the easiest entry points, for all new cyber-attacks.

Mail Assure Email Security helps you stay in control and protect your inbound and outbound email using collective threat intelligence, 24/7 email continuity and long-term email archiving.

Advanced Threat Protection Mail Assure checks every incoming, outgoing and internal email for malware, phishing, ransomware, viruses, spam and other threats. Proprietary machine learning and collective intelligence incorporates data from over 23 million mailboxes to defend against email-borne threats.

Email Continuity Even if a Email Server goes down, users can still receive, read and send email via a web interface supported by a network of highly available global data centers.

Affordable Email Security Easy, predictable billing. Pay per mailbox. No long-term contracts. No minimum mailbox requirements. No hardware to buy or software to install on endpoints. Mail Assure's filtering technology includes 24/7 email continuity, anti-phishing and impersonation protection by default—no upcharge.

Total Visibility And Control Over Email Flow

With a Web Interface, you can access and set the permission levels, view all quarantined messages and release, remove, blacklist, whitelist, or block those messages as needed.

Integration With Other Email Services Mail Assure works with any on-premise or cloud-based email service, adding an extra layer of protection to the default security features built into platforms, like: Google G-Suite, Microsoft 365 or Exchange, etc.

Seamless Integration with Microsoft 365 with the add-in from Microsoft AppSource. Designed to easily give Microsoft 365 users greater control and transparency over their email while enjoying the benefits of the additional Mail Assure security.

Data Loss Prevention And Email Archiving The built-in email archiving feature encrypts - in transit (using TLS) and at rest (using AES) - then compresses and stores all legitimate incoming and outgoing emails in Mail Assure's cloud-based vault to help ensure a safe and searchable history of all email communications to avoid the risk of losing messages.

Regional Data Storage and Support Centers Many businesses face strict rules regarding their data processing and security, and therefore need to use data centers located in their specific region. Mail Assure offers a default global region, but also allows you to select storage options for your logs, quarantines, and archive data in the US, EU, UK, Australia and Canada.

8 Reasons To Use Mail Assure

1. Advanced Threat Protection For Inbound And Outbound Email.
2. Email Continuity
3. Email Security Made Affordable
4. Get Total Visibility And Control Over Your Email Flow
5. Integration With Other Email Services And Infrastructures
6. Seamless Integration With Microsoft 365
7. Data Loss Prevention With Email Archiving
8. Regional Data Storage And Security
