

DISCOVER THE TRUTH **DON'T GUESS WHETHER YOU'RE SAFE**

Identify Opportunities For Network & Security Improvement!

We provide in-depth insights to help you better understand the current state of your business network!

Today's organizations, obviously, have increased demands on their network infrastructures, and end-point devices, like servers and computers.

These devices now require much higher levels of performance, availability, and mobility just to take advantage of today's business-essential software applications and new IP-based technologies.

Even more critical than your network and device performance, is your business network security.

The continual, and ever-rising threat (and volume) of today's sophisticated cyber-attacks presents every business new challenges - *almost daily* - requiring constant monitoring and updates just to maintain a practical level of protection.

Do you know if your computers and servers are up-to-date with all of their Operating System and Anti-Virus/Malware Security updates?

Do you even know if your computers and servers actually have a functioning Anti-Virus/Malware application ON and helping to protect them?

In today's world, it's not enough just to think everything is in place and working. You Must Know... For Sure!

Simply stated: It's Always What You Don't Know That You Don't Know That Costs You The Most... and I know, *You Don't Know Your Network.*

"Fingers-Crossed" and "Knocking-On-Wood" or Hoping That "It Won't Happen To Me" Are Not Real Business Strategies or Security Measures.

You must have real and current, COMPREHENSIVE information about the overall state of your network, servers and computers, including key performance and security metrics.

But knowing the current state of your network and devices is only the first step. You must utilize this information to make educated decisions about how you can remedy any current issues, minimize any performance problems or potential vulnerabilities, and mitigate future threats.

Having a strong, secure and reliable network is one of the best safeguards and foundational principles for optimizing your business operations. When your network and devices are safe, secure and working, so are your employees... and so is your business.

TRS utilizes the industry-leading IT assessment tool, that goes way beyond simple network discovery and documentation to provide real, actionable intelligence, including hard to detect issues, measuring risk, and even providing the recommended fixes or remediation processes.

NETWORK REPORTS

Network Assessments Include Real Device Discovery And Deliver Clear Documentation To Provide Tangible And Actionable Network Intelligence:

- Basic Site Diagram
- Device Aging Graphic
- Client Health Report
- Client Risk Report
- Full Detail Report
- Network Management Plan

Knowing Is Only The First Action Item!

SECURITY REPORTS

Security Assessments Identify And Document Device Vulnerabilities That Are At Risk Of Being Exploited And Could Cause Harm To The Business:

- Basic Security Report Card
- Data Breach Liability Report
- Login Failures Report
- User Behavior Report
- Security Health Report
- Security Risk Report
- Security Management Plan

If You Don't Measure, You Can't Improve!

"A Third-Party Network and Security Assessment can help you catch problems early on, BEFORE THEY AFFECT Your Performance & Bottom Line."
