MANAGED SECURITY SERVICES

Helping you improve

and maintain your cybersecurity readiness

Cybercriminals are using ever-evolving threat vectors to target businesses large and small, across all industries. Operational IT security has emerged as a mission-critical priority for businesses like yours.

43% of all breaches involve small- to mid-size businesses.[1]

61% of small- and mid-size companies had a cybersecurity incident in the last year.[1]

83% of organizations in the small- to mid-size category are not financially ready to recover from cyberattacks.[2]

For these and many other reasons, it's essential that you professionally manage, maintain, and monitor every aspect of your organization's IT use.

Here's a list of some of the potential attack vectors that can be attractive targets for cybercriminals:

- Internet
- Network
- People
- Applications
- Devices
- Data

Managing your IT security across each vulnerable technology within your organization is a complex undertaking and can't be left in the hands of just any IT technician. Each of the above technologies must be guarded by specific tools, solutions, and protocols. That's where our team steps into the picture. We partner with businesses across the region, providing the cyber-security management and response needed to help them stay protected and productive.

Some of the solutions used within our Managed Security Services:

- Patch management

- Endpoint detection and response

- Email security

- Data protection

- Web security

- 24/7/365 monitoring

- Password management

- Vulnerability scanning

Bringing our cybersecurity professionals on side to deliver Managed Security Services allows you to spend your time on high-value projects instead of implementing endless security patches and updates—but that's just the beginning. Because we utilize high-impact, enterprise-class cybersecurity solutions and protocols, you can use your IT assets and do business online with confidence.

We help you protect each part of your IT environment: fortifying against criminal breaches, providing risk mitigation to your organization, and giving you a better chance to avoid costly unplanned downtime.
