

CYBER-CRIME IS VERY REAL AND YOUR BUSINESS IS A TARGET!

Cyber-Criminals Are Targeting Your Business

Small businesses, like yours, are often easy prey for cyber-criminals, just for the simple fact that most small business owners do not invest in any level of appropriate cyber-security protection.

Our Multi-Layered Cyber-Security Platform

has been specifically designed to protect your business network via the six core threat areas including Gateway, Wireless, Web Protection, Anti-Virus/Anti-Malware, Patch Management and even includes Data Back-Up applications.

CORE 6+

BUSINESS NETWORK SECURITY PLUS

SYSTEMIZED, REAL-TIME BUSINESS CYBER-SECURITY

CORE6+ is a systemized approach to Small Business Network Security, which is all about taking a layered approach. **Unfortunately, there is *NO* such thing as a “One-and-Done, All-is-Protected” application.** You must have multiple layers of protection across your entire network. You must make certain that each individual defense Component has a back up... *just in case.* Which is why we protect – with multiple layers – the six core aspects of your network.

Thanks to our integrated Security Application Partners (Presidigy, Dell SonicWall and SolarWinds N-ABLE), we deliver the most comprehensive, layered, network security platform available. Which really means, with the **CORE6+** **You Get the Absolute Best Proactive, Detective and Reactive CyberSecurity Protection Solution available.**

The **CORE6+** Layered Security Platform starts with two main network security components: Gateway Protection and Wireless Security:

Constantly Updated - “Best In Class” – Gateway Threat Protection:

- Unified Threat Management
- Deep Packet Inspection
- Global Geo-IP Blocking
- Intrusion Prevention
- Content Filtering
- Gateway Anti-Virus/Anti-Malware
- Gateway Anti-SPAM

Wireless Network Security including Guest Network Segmentation:

- SSID Hiding
- MAC ID Filtering
- Static IP Addressing
- Restricted Access
- End-to-End Encryption
- Intrusion Detection and Prevention
- Wireless Administrative Alerting

The next four (of the six core) Layered Security components, we refer to as **BASE4+**, are individualized to each client device; and include Managed Anti-Virus and Anti-Malware Applications, Real-Time Web Protection with Scheduled and Individualized Content Filtering and Web Access Control, Automated and/or Administrative Patch Management, as well as Basic Document Back Up and Recovery for each individual user/device on the network:

Managed Anti-Virus and Anti-Malware Platform to Help Protect Email Clients and Users:

- Proactive Threat Knowledge
- Catch New and Hard-to-Detect Malware Threats
- Endpoint Signature-Based Learning
- Heuristic Checks and Sandboxing
- Behavioral Monitoring
- Active Protection
- Minimal Resource Requirements

Web Protection and Content Filtering to Protect Internet Usage and Web Applications:

- Keep Users Safe On The Internet
- Protects From Phishing Sites
- Protects From Drive-By-Downloads
- Content-Filtering Policies
- Website Blacklists
- Time and Content-based Browsing Policies
- Reporting

Fine-tune Patch Management to Optimize System Performance and Prevent Cyber-Attacks:

- Automation
- Customizable Policies and Scheduling
- Patch and Update Roll-Back
- Exchange and Office 365 Support
- Heightened Security for Vulnerable Programs
- Ability to Disable Device Updates
- Deep Scans

Basic Workstation Document Backup and Recovery (in Secure and Certified Data Centers):

- Unlimited Documents and File Size
- Automated Backup Twice A Day
- Detailed Reporting
- Infinitely Scalable Without Investment
- 24/7/365 Monitoring and Management
- Storage in Secure, USA Certified Data Centers
- Supported Documents = .DOC - .DOCX - .ODT - .PAGES - .PDF - .RTF - .TXT - .WPD - .WPS - .KEY - .PPS - .PPT - .PPTX - .PUB - .CSV - .XLR - .XLS - .XLSX
- + For An Additional Fee: Full System Backup and Recovery (True Delta, Encrypted)

REPLACE WITH REAL-TIME MANAGED EDR PROTECTION!

For More Information, Contact Us Today!

The **+** in our **CORE6+** and **BASE4+** Platform offerings is all about the additional **Inclusions** and available **Add-Ons**.

First, as you saw on the previous page, we recommend you upgrade from the **Managed Anti-Virus and Anti-Malware (AV)** tool, to the **Managed Endpoint Detection and Response (EDR)** tool. **Managed AV** is a “Scan-based” platform, which is a much less effective tactic against today’s sophisticated Cyber-Threats, versus the **Managed EDR** tool which monitors your computer’s processes Before, During and After execution to prevent threats in **REAL-TIME**.

There is actually an enormous amount of power **and value** hiding behind that little **+** sign. And **YES!** it is all available to anyone on either the full **CORE6+** Platform, or even only on the Endpoint Protection **BASE4+** Platform.

The **CORE6+** and **BASE4+** Platforms **Inclusions** are:

Your Preferred Level Of Support:

- Fully Managed and NBH Fee Included
- Fully Managed and Billed As Required
- **CoManaged and Billed As Required**
- DIY - Alerts and Notifications Only

CyberSecurity Awareness Training:

- Unlimited “Staff” Training
- Web-based (Online) Course
- Self-Paced
- “Manager” Portal
- Weekly “Awareness” Emails

Daily Alert Monitoring and Notifications:

- Gateway Alerts and Notifications
- Managed AV (**EDR**) Alerts and Notifications
- Patch Management Alerts and Notifications
- Device “Health” Alerts and Notifications

Other Included Services:

- Dark Web Scanning
- Basic Cyber Risk Assessment
- Asset Inventory and Tracking Report
- Monthly and Quarterly Platform Reporting
- *and So Much More...*

CORE6+ and **BASE4+** is Systemized, Real-Time Business CyberSecurity. Designed specifically as a multi-layered, comprehensive protection for your network’s core components. But you may also want additional protection...

The **CORE6+** and **BASE4+** **Add-Ons** we recommend are:

Managed EDR (*REAL-TIME Protection*):

- AI-based Ransomware Protection
- Behavioral AI Detection Engines
- Threat Intelligence and Indicators
- Automated Threat Response
- One-Click Remediation and Rollback
- Incident Forensics and Reporting

MailAssure (*Advanced Email Protection*):

- Blocks 99.84% of All Malware
- Detects and Protects from Phishing Attacks
- Secures Inbound and Outbound Email
- Full SPF/DKIM/DMARC Support
- 24/7 Email Continuity and Encryption Available
- Seamless Integrates with Microsoft 365

Cove Data Protection (*Cloud-First Backup*):

- Worldwide Data Centers and Cloud Storage
- Fully Managed SaaS Available
- Servers and Desktops
- Full Image Recovery and Virtualization
- Automated Recovery Testing
- Standby Image for Fast Failover

Microsoft 365 Backup (*Integrated Solution*):

- Backup Exchange, OneDrive and SharePoint
- Retention and Recoverability Controls
- Regional Cloud Storage
- Easily Restore Microsoft 365 Data
- *Microsoft Recommends In Their Terms Of Service That You Consistently Backup Your M365 Data...*

Our goal is simple:

We Want To Make Sure You Have Access To The Most Cost-Effective CyberSecurity Protection Available Today!
